EDUCATION

Georgia Institute of Technology

Master of Science in Cybersecurity, GPA: 3.75 / 4.0

Atlanta, GA
August 2025 – May 2027

SVKM's NMIMS Mukesh Patel School of Technology Management & Engineering

Bachelor of Technology in Computer Science and Engineering, Cybersecurity

Mumbai, India
July 2021 – May 2025

RELEVANT EXPERIENCE

Georgia Institute of Technology, Ivan Allen College of Liberal Arts

Graduate Teaching Assistant for PUBP/CS 6725 Information Security Strategies and Policies

Mumbai, India
August 2026 – December 2026

- Evaluate written assignments and final term papers and support assignment design for a graduate course taught by Prof. Milton M Mueller on organizational, national and transnational cybersecurity policies.

IIFL Finance

Cybersecurity Intern, Vulnerability Assessment and Governance

Mumbai, India
January 2025 – May 2025

- Uncovered XSS, SQL injection, JWT, privilege escalation across web, API and mobile applications, chaining one injection to confirmed data extraction
- Proved a missing rate limit on password reset by firing 1,000 Burp Intruder requests, all returning HTTP 200 and generating 1,000 emails
- Detected exploitable hosts across 5 business units with Nmap, Nessus and Metasploit, including default credentials, SMB disclosure and CVE-2017-0144
- Drafted an AI Governance Policy against ISO/IEC 42001 and the EU AI Act, and expanded 5paisa's SEBI CSCRf dashboard from 15 to 34 parameters

IIFL Securities

Cybersecurity Intern, Application Security

Mumbai, India
May 2024 – July 2024

- Detected a high-severity IDOR across multiple REST API endpoints, delivered reproducible PoCs, and confirmed the fix on retest.
- Executed DAST on enterprise web applications and REST APIs against the OWASP Top 10 and OWASP API Security Top 10.
- Bypassed SSL pinning and root detection with Frida and Objection to test mobile authorization logic outside the app UI.

PROJECT EXPERIENCE

Registration-Based Indicators for Detecting Abusive Activity

Course Project | PUBP 8803 – Cyber Threat Intelligence and Threat Hunting

Atlanta, GA
January 2026 – May 2026

- Executed the full intelligence cycle for an external customer reducing abusive registrations without blocking legitimate users.
- Tested 30 domains across disposable, mainstream, abuse-confirmed and typosquat categories, determining that vendor scores track exposure rather than intent.
- Identified typosquatting and homograph structure as the strongest signal, delivering a TLP:AMBER report with ATT&CK mappings and 7 recommendations.

Privacy Impact Assessment of LuaLegal

Course Project | CS/PUBP 6726 – Privacy Tech Policy Law

Atlanta, GA
September 2025 – October 2025

- Assessed LuaLegal, an AI legal meeting assistant, using NIST TIP and DOJ PIA templates against ECPA, FTC FIPPs and NIST AI RMF.
- Scored 8 privacy risks on likelihood and impact across a 3-stage pipeline and 4 AI sub-processors under Zero Data Retention terms.
- Recommended 5 controls including per-participant timestamped consent verification and vendor prompt-injection testing.

Remote Attestation with a Trusted Platform Module

Course Project | CS 6238 – Secure Computer Systems

Atlanta, GA
January 2026 – May 2026

- Built a Python TPM attestation service verifying VM instances via nonce-based challenge-response and PCR-bound sealing policies
- Implemented OAuth 2.0 with PKCE against Okta, then disabled PKCE, state and nonce validation to demonstrate code interception, CSRF and replay.

Inter-Domain Routing and BGP Security

Course Project | CS 6250 – Computer Networks II

Atlanta, GA
January 2026 – May 2026

- Configured a multi-AS Mini-Internet topology with customer and peer routing policies, then validated RPKI origin validation and blackholing against real-world hijack and route leak events using BGPStream.

CAMPUS & COMMUNITY INVOLVEMENT

Graduate Student Senator for Ivan Allen College of Liberal Arts, Georgia Tech Student Government Association

August 2025 – May 2026

SKILLS

- **Offensive Security & Penetration Testing:** Penetration testing (web, API, mobile, network), Vulnerability Assessment and Penetration Testing (VAPT), Dynamic Application Security Testing (DAST), manual exploitation, proof-of-concept development, remediation validation and retesting, SSL pinning and root detection bypass
- **Vulnerability Assessment:** SQL injection, cross-site scripting (XSS), Insecure Direct Object Reference (IDOR), broken authentication and authorization, JWT flaws, privilege escalation, OTP and CAPTCHA bypass, missing rate limiting, default credentials, CVE-2017-0144 (EternalBlue), CSRF, replay attacks
- **Governance, Risk & Compliance:** AI governance, ISO/IEC 42001, EU AI Act, OECD AI Principles, SEBI CSCRf, policy authoring, gap assessment, control mapping, compliance dashboarding, audit checklist development, Privacy Impact Assessment (PIA), NIST Privacy Framework, NIST AI Risk Management Framework, FTC Fair Information Practice Principles (FIPPs), Electronic Communications Privacy Act (ECPA), data flow mapping, notice and consent analysis
- **Threat Intelligence and Hunting:** Intelligence cycle (requirements, collection, analysis, dissemination), collection strategy, indicator analysis, confidence grading, Traffic Light Protocol (TLP), MITRE ATT&CK, dissemination reporting, typosquatting and homograph analysis
- **Identity, Access Control & Trusted Computing:** OAuth 2.0 Authorization Code flow, PKCE, OpenID Connect (OIDC), Okta, JWT validation, nonce and state validation, Role-Based Access Control (RBAC), Trusted Platform Module (TPM 2.0), remote attestation, Platform Configuration Registers (PCR), Bell-LaPadula, Biba, Clark-Wilson
- **Tools and Technologies:** Burp Suite (Repeater, Intruder), Nessus, Nmap, Metasploit, Frida, Objection, JADX, Postman, OWASP Top 10, OWASP API Security Top 10, Linux, Python, Solidity, JavaScript (React, Node.js), Flask, SQL
